Aura Bot

Auto-pilot trading — client guide

What this guide covers

Everything a new client needs to understand Aura Bot: how the auto-pilot sessions work, how money moves in and out, what is withdrawable and what is not, how to follow live trades, and how to trade manually from profit. Plain language, no jargon.

Platform	faucetpilot.tech
Sessions per day	2 (Monday to Friday)
Return per session	0.5% of your balance
Deposits & payouts	USDT on the BEP20 network (BNB Smart Chain)

Trading carries risk. Past sessions do not guarantee future results. Only fund the account with money you can afford to leave working.

1. How the auto-pilot works

Aura Bot runs on its own. Once your account is funded there is nothing to switch on and nothing to watch — the bot opens and closes forex positions during scheduled sessions and credits the result to your profit balance.

Session times	09:00 and 21:00 UTC (12:00 noon and midnight in Nairobi)
Trading days	Monday to Friday. The bot pauses on Saturday and Sunday, when the forex market is closed.
Per session	0.5% of your trading balance
Per trading day	1% across the two sessions
Inside one session	The session profit is spread across 4–6 real positions, each running roughly 15–45 minutes

Because the profit of a session is split across several positions, some individual trades close at a small loss while the session as a whole lands on the target. That is normal and every trade is listed in your history.

2. Money: what is locked and what is yours to take

This is the single most important thing to understand, and it is where most questions come from.

Deposited funds	Locked as trading capital. This is the money the bot trades with, so it stays in the account and cannot be withdrawn.
Withdrawable profit	Everything the bot earns for you. This is the balance you can request payouts from, in part or in full.
PnL	Your running profit and loss — the lifetime performance of the account.
Equity	Deposited funds plus profit: the total value of the account right now.

A withdrawal request larger than your withdrawable profit is declined automatically, and the dashboard shows the available figure before you submit.

3. Funding your account

Making a deposit

1. Open **Deposit** on your dashboard and enter the amount you are sending.
2. Send USDT on the **BEP20 (BNB Smart Chain)** network to the deposit address shown on the page: **0xc41bec30ee6f653fde87113ef9f6bf322f146941**
3. Submit the request. It appears as **pending** until our team confirms the transfer on-chain.
4. Once approved, the amount joins your trading capital and starts working in the next session.

Only send USDT on BEP20. Coins sent on another network cannot be recovered.

Requesting a payout

1. Save your own **BEP20 wallet address** on the dashboard — you can change it at any time.
2. Enter an amount up to your withdrawable profit, or use **Withdraw all profit**.
3. The request is queued as pending and reviewed by our team.
4. On approval the USDT is sent to your wallet and the amount leaves your profit balance.

4. Following your trades

- **Live** — open positions as they run, with the floating profit updating second by second on a live chart, plus trades queued for later in the session.
- **Trades** — full history grouped by session: pair, direction, lot size, entry and exit price, pips, and profit, with win rate and net pips.
- **Profit curve** — a TradingView-style chart of your cumulative profit, trade by trade.
- **Bot status** — a countdown to the next session, how many sessions have run, uptime, and the last session's result.

5. Manual trading from profit

Alongside the auto-pilot you can trade yourself on the **Manual** page. You pick a pair, set a lot size, and buy or sell at the live price. Margin of $100 per 1.00 lot is held from your profit balance, up to five open positions at a time. Closing a position returns the margin and applies the result to your profit and PnL. Manual trading uses profit only — your deposited capital is never touched.

6. Your account

Sign in	Email and password, or your Google account.
Profile	Add a picture and the name shown on your account.
Identity check	Optional. It is not required to trade, deposit or withdraw — it simply helps us confirm a payout belongs to you if a request is ever queried. Documents are stored privately.
Referrals	Share your personal invite link from the dashboard and see everyone who joined through you.
Support	The chat button in the corner of every page answers questions about sessions, deposits, payouts and the schedule.
Install	Add the site to your phone's home screen to use it like an app.

7. Questions clients ask most

Why is nothing happening today?	It is likely a weekend — the bot only trades Monday to Friday. Bot status shows the exact time of the next session.
Why can't I withdraw my deposit?	Deposited funds are the capital the bot trades with. Profit is what you withdraw, and it has no lock-up.
A trade closed at a loss — is that a fault?	No. Each session is made up of several positions, and the session total is what lands in your profit balance.
How long does a payout take?	Each request is reviewed by our team before the USDT is sent. You can follow the status on your dashboard.
Can I add more funds later?	Yes. Every approved deposit joins your capital and increases what each 0.5% session earns.
